

Kahoot

# Distributed 1 (Fall26)

Test your understanding of distributed systems basics: transparency types, middleware roles, structured overlays, scalability dimensions, and replication for performance.

## Questions (10)

1 - True or false

True or false

**A distributed system consists of a single type of node.**

| | |
|---|---|
| True | ✗ |
| False | ✓ |

2 - True or false

True or false

**In a structured overlay network, the neighboring nodes of a node are randomly selected.**

| | |
|---|---|
| True | ✗ |
| False | ✓ |

3 - True or false

True or false

**The distribution transparency is to hide the fact that processes/resources are dispersed across multiple computers.**

| | |
|---|---|
| True | ✓ |
| False | ✗ |

4 - True or false

True or false

**A middleware sits on top of the application layer.**

| | |
|---|---|
| True | ✗ |
| False | ✓ |

5 - True or false

True or false

**A middleware exposes a common interface to applications.**

- True ✓
- False ✗

6 - True or false

True or false

**One of the four design goals for a distributed system is to make it easy for users to access and share resources.**

- True ✓
- False ✗

7 - True or false

True or false

**The relocation transparency ensures that the users do not know whether resources are relocated while in use.**

- True ✓
- False ✗

8 - Quiz

Quiz

**Which one of the following is not the scalability dimension?**

- Size scalability ✗
- Geographical scalability ✗
- Administrative scalability ✗
- Interoperable scalability ✓

9 - True or false

True or false

**Hiding communication latencies is applicable to improving geographical scalability.**

- True ✓
- False ✗

10 - True or false

True or false

**Through replication, the performance of a large-scale system can be improved.**

- True ✓
- False ✗
