

Kahoot

Distributed 5 (Fall26)

Quiz on key distributed systems concepts: thin clients, stubs, transparency types, client-server connection setup, iterative vs. concurrent servers, port assignment, daemons and soft-state servers.

Questions (10)

1 - True or false

True or false

In the thin client approach, a client is offered with only a user interface for each service.

- True ✓
- False ✗

2 - Quiz

Quiz

Hiding how data is represented is called the _____ transparency.

- Access ✓
- Location ✗
- Relocation ✗
- Failure ✗

3 - True or false

True or false

The access transparency is generally handled through the middleware.

- True ✗
- False ✓

4 - True or false

True or false

The client stub transforms local procedure calls into messages that are sent to the server.

- True ✓
- False ✗

5 - True or false

True or false

Automatic retransmission of a message is one way to implement concurrency transparency.

- True ✗
- False ✓

6 - True or false

True or false

Virtualization reduces the portability of software across heterogeneous platforms.

- True ✗
- False ✓

7 - True or false

True or false

A process virtual machine provides a virtualized execution environment for a single program or process.

- True ✓
- False ✗

8 - True or false

True or false

The Java Virtual Machine allows Java programs to run only on operating systems specifically designed for Java.

- True ✗
- False ✓

9 - True or false

True or false

A hosted virtual machine monitor virtualizes both the system call interface and the general hardware interface.

- True ✓
- False ✗

10 - True or false

True or false

A native virtual machine monitor allows multiple guest operating systems to run independently on the same hardware.

- True ✓
- False ✗
