

Kahoot

Distributed 6 (Fall26)

Quiz focusing on RPC concepts: client stubs, parameter marshalling, message formats, asynchronous and multicast RPC, and callback mechanisms in distributed systems.

Questions (10)

1 - True or false

True or false

The client stub performs parameter marshaling.

- True ✓
- False ✗

2 - True or false

True or false

The caller is aware of how the client stub constructs and sends the request message.

- True ✗
- False ✓

3 - True or false

True or false

In a distributed system, all machines are required to have the same architecture.

- True ✗
- False ✓

4 - True or false

True or false

One way to handle a pointer in RPC is to marshal the data referenced by the pointer rather than the pointer itself.

- True ✓
- False ✗

5 - Quiz

Quiz

_____ is to used to specify a message format for RPC.

- Marshalling ✗
- Client stub ✗
- Server stub ✗
- interface definition language ✓

6 - True or false

True or false

Message formatting always has to be explicitly implemented by the programmer.

- True ✗
- False ✓

7 - True or false

True or false

In a layered protocol architecture, each layer provides an interface to the layer directly below it.

- True ✗
- False ✓

8 - True or false

True or false

In the adapted reference model, the session and presentation layers are incorporated into the middleware layer.

- True ✓
- False ✗

9 - True or false

True or false

Persistent communication requires both the sender and receiver to remain active until message delivery is completed.

- True ✗
- False ✓

10 - True or false

True or false

Synchronous communication always blocks the sender until a response from the receiver is returned.

True	✗
False	✓
